

Consent form for participants in NSF grant BCS-0303447

This form is designed to insure that all participants in our project, *Anaphora in the African Languages*, supported by the National Science Foundation (USA), are informed of the level of risk they face if they consent to participate.

The project will not expose any participant to danger different from that encountered in daily life. The survey questions only concern the degree to which sentences in the informant's native language are or are not acceptable. None of the questions involved in the project concern any aspect of the personal lives, or the political, social or religious beliefs of participants. The data we collect will be publically reported and participants will be thanked by name unless they choose to remain anonymous. Participants may choose to remain anonymous for the purposes of publication by checking a box that is provided on the questionnaire.

If you choose to participate in the project please sign below and print your name underneath.
